South Fort Blue Danes

Overview

My project's Idea for this semester is creating a mock website for a Kennel in my Hometown that breeds Great Danes. Their kennel breeds emotional support and service animals, run by veterans, with a targeted demographic of veterans and their families. South Fort Blue Danes will be a website specifically dedicated to allow this company to have a further reach to these families. This will help the company display pups from each litter and allow potential buyers to contact the kennel about any of the pups relatively easier and more organized. The aim is to make a quality website for this kennel to allow them to have a wider reach and have an organized home site for their company.

Data Storage, Manipulation, and Viewing:

There will be five main pages; About us, Find a Puppy, Puppy Pictures(of previous litters), Contact Us, and Home. The Home page will be the first page the user sees. The top portion of this page will have the navigation bar at the top with our other page choices as well as a sign up and log in buttons for those who want an account or already have one. Following that a picture of our puppies and their cause along with their social medias as well. Most of the data will only be allowed to be changed by an Admin account so adding an account ID/code would be preferable. The About us Page will be the background of the owners and why they chose to create their business. The Find a Puppy Page will display multiple puppies, as well as their names, descriptions of physical attributes, and personalities. Inside of the Puppy Pictures page, it is intended for the company to post pictures of previous litters and families happily connecting with their new member. By using the log in or sign up you will be able to contact the kennel, and that would just be first and last names, an email, and a password along. In the Contact Us page, it will have a number, an email, and their social media pages. There will also be a feature for completing a form to get in contact with the Kennel for adoption, which will be sent to the kennel through email.
